- Introduction to Unix (*nix)
- Course Overview

- Introduction to Unix (*nix)
- Course Overview

- What
 - A family of operating systems
 - Widely used
 - A cool thing

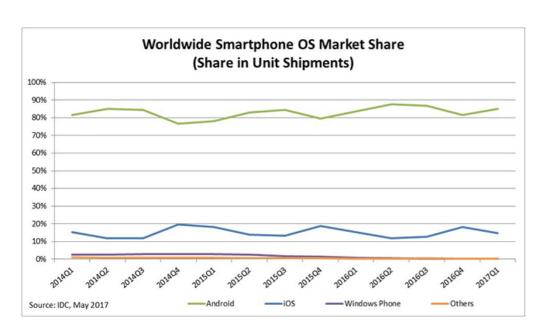

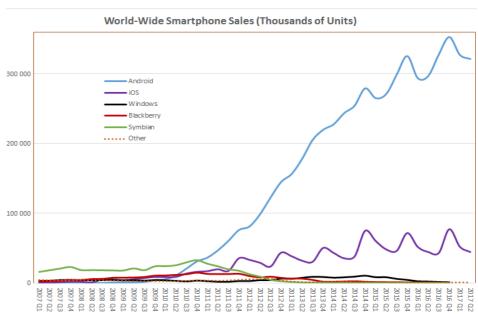

Smartphone

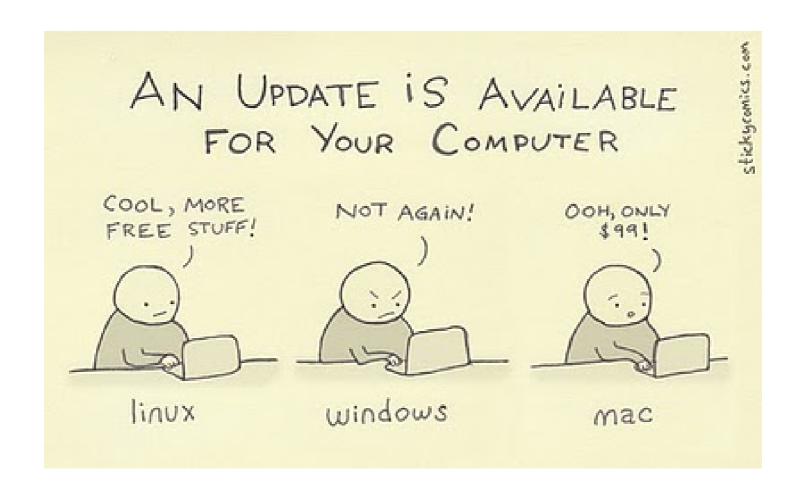

Web Server

Source	Date		Unix,	Unix-lil	Microsoft	References		
		All	Linux	BSD	Unknown	Windows	References	
W3Techs	Feb 2015	67.8%	35.9% 0.95% 30.9% 32		32.3%	[54][55]		
Security Space	Feb 2014	<79.3%	N/A			>20.7%	[56][57]	
W3Cook	May 2015	98.3%	96.6%	1.7%	0%	1.7%	[58]	

Category Source		Date	Linux	BSD and other Unix	Windows	In- house	Other
Desktop, laptop, netbook	Net Applications ^[68]	Dec 2014	1.34% (Ubuntu, etc.)	7.21% (OS X)	91.45% (7, 8, XP, Vista)		
Smartphone, tablet, handheld game console, smart TV, Wearable computer	StatCounter Global Stats ^[69]	Dec 2014	53.86% (Android)	31.10% (iOS)	1.87% (WP8, RT)		13.17%
Server (web)	W3Techs ^[70]	Sep 2014	36.72% (Debian, Ubuntu, CentOS, RHEL, Gentoo)	30.18% (FreeBSD, HP- UX, Solaris, OS X Server)	33.10% (W2K3, W2K8, W2K12)		
Supercomputer	TOP500 ^[67]	Nov 2014	97.0% (Custom)	2.4% (AIX)	0.2%		0.2%
Mainframe	Gartner ^[64]	Dec 2009	28% (SLES, RHEL)	72% (z/OS) UNIX			
Gaming console	Nintendo, Sony, Microsoft, Valve Corporation	Jur 20	Android	1	.16%		
Embedded	UBM Electronics ^[71]		iOS/macOS Windows			.79%	41.1%
Real time	NewTechPress ^[72]	No 20	Other		21	.66%	24.8%
			OS Device Shipments, Gartner ^[23]				

According to Gartner, the following is the worldwide device shipments (referring to wholesale) by operating system, which includes smartphones, tablets, laptops and PCs together.

- As your daily OS (work with it)
 - Coding
 - Web
 - Text processing
 - Multimedia
 - Shells
 - a working space
- It's "Free"

- For studying general OS concepts
 - Open source
 - High quality documents (freely available)
 - Community

- History
 - Multics: mid-1960, MIT+GE+Bell Labs
 - "Multiplexed Information and Computing Service", allowing multiple users to access a mainframe simultaneously
 - Segmentation, Dynamic linking
 - Complexity
 - Failed

- History
 - Unics: 1969, Ken Thompson, Dennis Ritchie
 - A game called Space Travel
 - Smaller than Multics
 - Using PDP-7 assemble language
 - Hierarchical file system, process, device files, command-line interpreter
 - Single task
 - "Uniplexed Information and Computing Service"
 - Core concepts of Unix

- History
 - C programming language, 1972, Dennis Ritchie
 - Rewrite unix for PDP-11

PROGRAMMING LANGUAGE

Unix

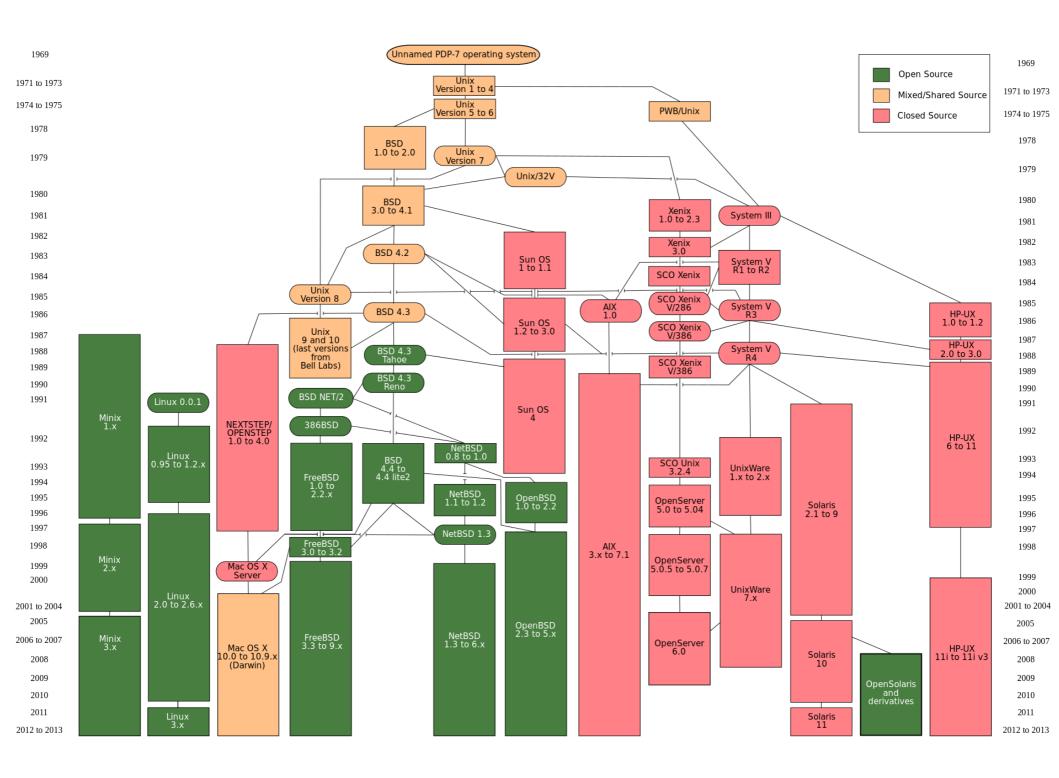

- History
 - GNU Project, 1983, Richard Stallman
 - GNU: GNU is Not Unix
 - Unix-like
 - Free software, contain no Unix code
 - GNU software
 - gcc (GNU C compiler)
 - gdb (GNU debugger)
 - Emacs
 - Free Software Foundation
 - Free Software License
 - GNU General Public License (GPL)

Unix

- Unix standardization
 - ISO C
 - Standard for the C programming language
 - POSIX
 - IEEE Portable Operating System Interface
 - SUS
 - Single Unix Specification

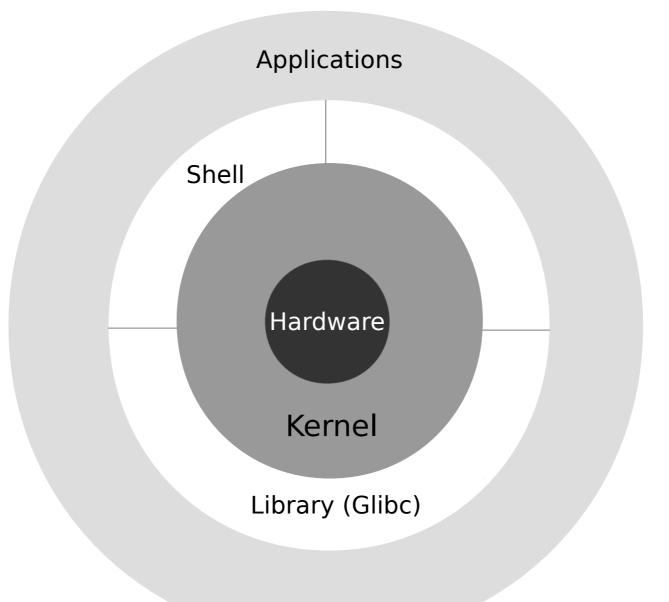

Unix

- Unix implementations
 - Unix v6, v7 (Bell lab)
 - FreeBSD (U.C. Berkeley)
 - Sun OS/Solaris (Sun)
 - System V (AT&T)
 - OS X (Apple)
 - Linux, 1991, Linus Torvalds
 - A (free) kernel with support of GNU packages
 - distributions
 - Ubuntu, Debian, CentOS, Federa, Gentoo, ArchLinux
 - Android

Operating System

- OS in the eyes of users
 - Can I run XX software?
- OS in the eyes of CS students
 - Process, thread, paging, file system, ...
 - Can I write XX software on it to make some money/change the world?

- Login
 - User name
 - Password

- File and Directory
 - Hierarchical structure
 - /home/ybwu/Documents/myfile
 - Root directory: "/"

- Input and Output
 - Human-machine interaction
 - Keyboards
 - Monitors
- Files!

- "Everything is a file"
 - Documents
 - Directories
 - Hard-drives
 - Keyboards
 - Printers
 - /proc
- The same API: open, read, write, close

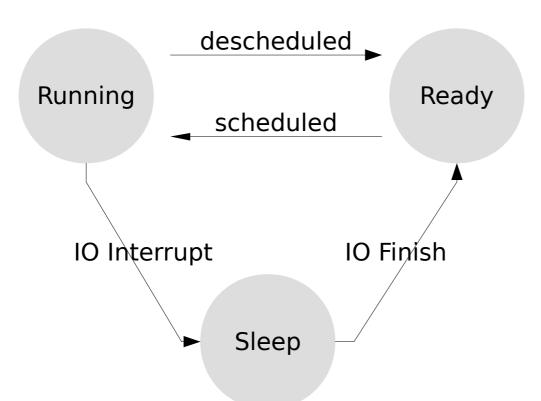

- File Input and File Output
 - File operations
 - File descriptor
 - unsigned int
 - Allocate when open a file
 - Revoke when close a file
 - read() / write()

```
int fd = open("foo", "r");
read(fd, buffer, size);
close(fd);
```

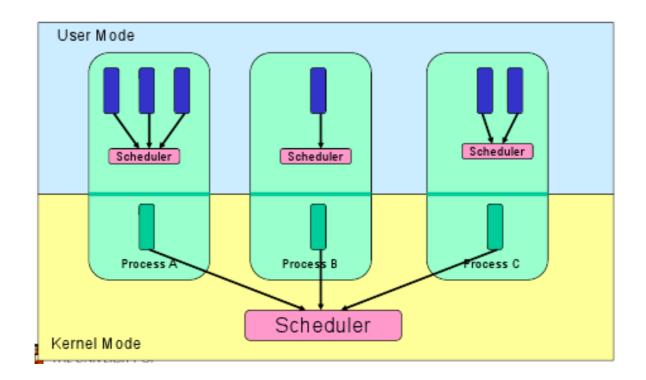

- File Input and File Output
 - Standard input, output, error
 - 3 file descriptors
 - Automatic allocated for every process

```
read(STDIN_FILENO, buffer, size);
write(STDOUT_FILENO, buffer, size);
write(STDERR_FILENO, buffer, size);
```

- Process
 - Process ID (PID)
 - Process status: ready, run, sleep

- Thread
 - Processes that share same address spaces, file descriptors, ...
 - Kernel thread / User thread

- Communications of processes
- Example: Signal
 - Tell a process that something has happened
 - Example
 - pressing Ctrl+C generate a signal to terminate current process

- Memory management
 - Segmentation
 - Paging

- File system
 - Inode

- Handling Errors
 - Not only report error, also provide detail info.
 - Variable: errno
 - Function: void perror(char* msg);
 - Print msg
 - Print error message string corresponding to the current errno

- System Call and Library Function
 - System Call:
 - Provided by kernel
 - Doing restricted operations with hardware
 - User mode, kernel mode
 - Library Function
 - Provided by user mode software developer
 - Some functions reused many times

```
#include <stdio.h>
void foo()
                                      User application
   printf("bar\n");
      printf()
                                     Library Functions
      fprintf()
     malloc()
                                     (Glibc)
       atoi()
 write(), reads(),
                                     System Calls
      mmap()
 Kernel
```

- Summary
 - terms
 - File descriptor, stdin, stdout, stderr
 - Process, thread, Pid
 - errno, perror(),
 - Signal: Ctrl + C
 - System Call
 - Library Functions

- Introduction to *nix
- Course Overview

Course Overview

- Objectives
 - Reviewing core concepts of OS
 - Having some fun on coding
- How
 - Reading
 - Coding
 - Presentation

Course Overview

- In this semester:
 - 6 projects
 - 3 of them need oral presentations
 - Course website:

http://ybwu.org/ecnu-oslabs/index.html

- Project 0
 - To get familiar with Linux
 - Shell command
 - cd, ls, mkdir, rm, ...
 - Dev environment
 - gcc, gdb

- Project 1
 - Sorting
 - Warm up with Linux programming
 - I/O system call

- Project 2
 - Implement your own shell
 - Linux process API
 - Redirect
 - Pipe

- Project 3
 - Implement your own malloc() / free()
 - Dynamic memory allocation
 - The pointer of C programming language

- Project 4
 - Implement your own lock
 - Introduction to concurrency
 - Linux pthread API
 - Thread safe data structures

- Project 5
 - Implement a file defragmentor
 - Reorganize file blocks
 - basic concepts of file system

- Projects
 - P0, P1, P2: single
 - P3, P4, P5: groups of three.
- Grading
 - The quality of your projects
 - Presentation
- General advice
 - Start early
 - Build your projects incrementally

- How
 - Reading
 - Coding
 - Presentation

Reading is important

- You may spend 50% of your time on reading

materials.

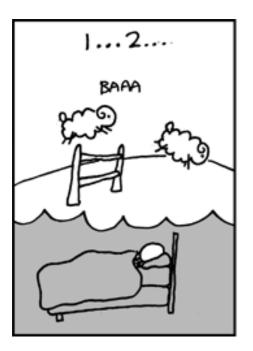

- Reading
 - The main text book:
 - Operating Systems: Three Easy Pieces, by Remzi
 H. Arpaci-Dusseau and Andrea C. Arpaci-Dusseau
 - http://pages.cs.wisc.edu/~remzi/OSTEP/

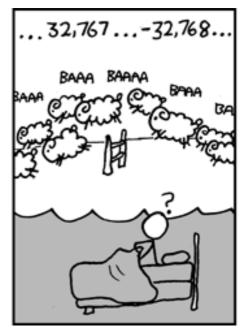

- Reading
 - Reference for Unix programming:
 - Advanced Programming in the UNIX Environment, by W. Richard Stevens, Stephen A. Rago
 - Reference for C programming:
 - The C Programming Language, by Brian W Kernighan, Dennis M. Ritchie
 - Reference for Linux kernel:
 - Linux Kernel Development, by Robert Love

- Reading
 - RTFM
 - "Read The Manual"

- Coding
 - Using C, no C++, no Java ...
 - Compile with gcc
 - Debug with gdb
 - Maybe without IDE
- Make your code
 - Well structured
 - Clean
 - Easy to read

- Presentation
 - you will present one of your projects
 - About
 - What have you done
 - How to accomplish them
 - Your favorite parts
 - What did you learn
 - ...

Operating System Labs

	9.11	18	25	10.2	9	16	23	30	11.6	13	20	27	12.4	11	18	25	1.1

P5															L♥		▼

- Policies
 - Plagiarism policy
 - Late policy

- Plagiarism policy
 - What is OK
 - Discuss programming specifications
 - What is the meaning of "redirection"
 - Discuss reading materials
 - What are the differences between exec functions?
 - Discuss implementation strategies
 - How to make the lock faster?

- Plagiarism policy
 - What is NOT OK
 - Copy codes/docs from someone
 - Beg someone to write a copy for you

- If we discover any improper code sharing
 - ALL participants will loss ALL credits of the project

No Cheating!

- Late policy
 - For P0, P1, P2
 - Late handins are NOT accepted.
 - For P3, P4, P5
 - Your group will have 3 "late days".
 - You need to email TA at least 1 hour before the dateline.
 - If all your 3 "late days" are used, late handins will not be accepted.
- Start Early!
